JOB DESCRIPTION

We have many new wonderful opportunities in our existing teams as well as new
teams being formed for 2016 for fresh young and promising graduates. Roles and
responsibilities vary but will take part in one of these products:

- **System Software Development and Maintenance:**
  - A Real-Time Operating System (RTOS), which is used by different switching
    applications, includes functionalities for single sided, double sided, and cluster
    systems.
  - A Virtual Machine (VM) which is an entity that makes it possible to run
    programs compiled into machine code on a platform using commercial
    processors. VM provides kernel functions, e.g. buffering and scheduling
    signals, communication functions, compiling functions, loading functions,
    memory allocation and management, as well as supports functionality for the
    RTD (Real Time Debugger).
  - Hardware Abstraction Layer (HAL) – a set of drivers, and Operating System
    Interface (OSI), providing access to functions that OS offers.
    The RTOS

- **Component Based Architecture Middleware:**
  - A high capacity / multi-servers platform to supports high availability, scalability
    and manageability so that the customer can reuse these functions to save time
    to develop their mission-critical products and accelerate their time to market.

- **Linux OS Customization and Maintenance:**
  - Develops and maintains products based on commercial Linux distributions
  - Modifying kernel to support new features.
  - Implementing new applications/services.

- **IMS (IP Multimedia Subsystem) Network:**
  - Develop and maintain the IMS core network features to manage the signalling
  - Build and configure the system environments by scripts.
  - Perform system test and feature test.

- **Continuous Integration Support**
  - Setup and enhance the automated build/test system
  - Automate test cases
JOB REQUIREMENTS

If you have just graduated University with a Bachelor Degree in either Information Technology, Computer Science or a related degree with:

- Strong IT background and fluent in at least one programming language
- Strong problem-solving skill, with a logical, analytical approach to work
- Interested in System software and/or Embedded software
- Proactive and positive with good communication skills
- High team work spirit and eager to learn new technologies
